

THE
ROBERT M. BUCHAN
DEPARTMENT OF MINING

Queen's
UNIVERSITY

The Basics of Geology, Mining and Processing for the Investment Community

*The only complete Geology, Mining, and Mineral Processing
short course taught by professionals in each field*

Highlights

- ◆ Mineral Deposits
- ◆ Fundamentals of Exploration
- ◆ Resource Estimation & Reporting

- ◆ Mining Methods
- ◆ Mineral Processing
- ◆ Case Studies

The objective of the course is to provide the students with an understanding of the technical terms, methods, processes, the linkages between them, and the ability to better assess the technical risks.

This course is intended for people who are interested in a broad overview of how the mining business works from a technical perspective.

Aspects of Geology, Mining and Mineral Processing will be addressed in the context of the discovery, development and production of mineral deposits.

For people with no technical background in geology or mining, the course will provide a basic introduction of the critical technical factors impacting on the success of mining companies.

For those with some technical expertise, the course will serve as a refresher and as a way to integrate their specific knowledge into the broader technical aspects of the mining sector.

Basics of Geology, Mining, and Mineral Processing

Accredited for 12.5 hrs of IIROC Professional Development CE
